

10 reasons for Our token sale and further development of our Blockchain platform

Enhancing Collaborative SMART Investing™ solutions?

1. AML and KYC checks are currently manual making them costly and slow, this process can be improved to reduce minimum investment and increase return. The aim is to get the minimum investment to \$1 per person per investment. This will open up all investors, including the 3 billion currently unbanked people in the emerging economies.
2. Fees to list the investment structure currently dilute returns and therefore with further development these can be improved.
3. The investment process requires further enhancement which smart contracts can assist with, reducing middlemen and increasing returns.
4. Due diligence checks are partly manual and build out of further algorithms, AI, big data and crowd collaboration / crowd diligence will further streamline the process.
5. With smart contracts integrating with real estate management agents, Wealth Migrate will be able to move dividend payouts to more frequently.
6. Wealth Migrate constantly needs to grow its investor base and those in the Crypto community require a diversification in terms of investment. (Investors can already invest on the platform using Bitcoin)
7. To truly have a global impact we need to enable any investor, anywhere to be able to invest at anytime. It is essential to have a crypto to allow cross border transactions, effectively and efficiently.
8. To enable the platform to integrate globally with other best of breed real estate and investment platforms, old world companies like REITS or funds and to provide the trusted global solution.
9. To provide a gamification instrument to unlock network effects, increase engagement, empower people with access to the knowledge they need through 'learning while doing' and ultimately unlock the whole ecosystem
10. The most important component is TRUST. The number one barrier to growth is investors trusting the platform, trusting the providers, trusting the investments and trusting their money is safe and they will be paid a return. Blockchain is the foundation for trust in the social commerce economy.
